

ABSTRACT OF THE DISCLOSURE

The present invention provides a multi-meandered antenna with multiple bands and single input to be used in a vehicle wireless communication environment, which comprises: an input end, coupled to a metal body of said vehicle for getting wireless
5 signals, and at least one meandered antenna, coupled to said input end for transmitting or receiving said wireless signals. Whereby, said multi-meandered antenna with multiple bands and single input can satisfy the various wireless communication requirements of said vehicle after combining.
